

MainStay MacKay Total Return Bond Fund

A: MTMAX | C: MTMCX | I: MTMIX | R1: MTMRX | R2: MTRTX | R3: MTRVX | R6: MTRDX

All data as of 6/30/19

A dynamic core bond fund

Seeks: Total return.

Morningstar Category: Intermediate Core-Plus Bond

Benchmark: Bloomberg Barclays US Aggregate Bond Index

Dynamic investment approach

The team evaluates investment opportunities based on macroeconomic cycles coupled with a comprehensive analysis at the security level.

Focus on risk management

The team seeks to discard securities with inappropriate levels of risk (financial risk, liquidity risk, political risk, and other risks).

Differentiated Experience

The team's CIO served on the President's Council of Economic Advisors and the U.S. Congress Joint Economic Committee, making him well suited to analyze macroeconomic trends.

Returns represent past performance which is no guarantee of future results. Current performance may be lower or higher. Investment return and principal value will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Performance reflects a contractual fee waiver and/or expense limitation agreement for Class A and I shares in effect through 2/28/20, without which total returns may have been lower. This agreement renews automatically for one-year terms unless written notice is provided before the start of the next term or upon approval of the Board. No initial sales charge applies on investments of \$1 million or more (and certain other qualified purchases). However, a contingent deferred sales charge of 1.00% may be imposed on certain redemptions made within 18 months of the date of purchase on shares that were purchased without an initial sales charge. Visit nylinvestments.com/funds for the most recent month-end performance. Expenses stated are as of the fund's most recent prospectus.

Fund Statistics³

Fund Inception	1/2/91
Total Net Assets (all classes)	\$1.3 billion
Distribution Frequency	Monthly
Number of Holdings	349
Annual Turnover Rate (%)	95

	Fund	Benchmark
Effective Maturity	7.7 Yrs	7.9 Yrs
Effective Duration	5.7 Yrs	5.7 Yrs

	Class A	
Standard Deviation (3yr) (%)	2.85	2.99
Beta (3yr)	0.93	n/a
R-Squared (3yr)	0.93	n/a
Sharpe Ratio (3yr)	0.45	0.31

Yields and Distributions (Class A)	
SEC 30-Day Yield	2.25
Unsubsidized 30-Day Yield	2.24
Last Distribution: Jun 2019 (\$)	0.0243

SEC 30-Day Yield is based on net investment income for the 30-day period ended 6/30/19 divided by the offering price per share on that date. Yields for other share classes will vary.

Unsubsidized 30-Day Yield reflects what the yield would have been without the effect of waivers and/or reimbursements.

Not FDIC/NCUA Insured | Not a Deposit | May Lose Value | No Bank Guarantee | Not Insured by Any Government Agency

MainStay MacKay Total Return Bond Fund

Credit Quality Breakdown (%)

Percentages are based on fixed-income securities held in the Fund's investment portfolio and exclude any equity or convertible securities and cash or cash equivalents. Ratings apply to the underlying portfolio of debt securities held by the Fund and are rated by an independent rating agency, such as Standard and Poor's or Moody's. If ratings are provided by the rating agencies, but differ, the higher rating will be utilized. If only one rating is provided, the available rating will be utilized. Securities that are unrated by the rating agencies are reflected as such in the breakdown. Unrated securities do not necessarily indicate low quality. S&P rates borrowers on a scale from AAA to D. AAA through BBB represent investment grade, while BB through D represent non-investment grade.

Top Sectors (%)

Mortgage Securities	33.7
Financial	17.9
Government	11.7
Consumer, Non-cyclical	8.1
Communications	6.0
Consumer, Cyclical	4.3

Fund Manager since 2011
Industry experience: 40 years

Stephen Cianci, CFA
Fund Manager since 2018
Industry experience: 27 years

Neil Moriarty, III
Fund Manager since 2018
Industry experience: 32 years

Before You Invest

Before considering an investment in the Fund, you should understand that you could lose money.

Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. These risks may be greater for emerging markets. Investing in below investment grade securities may carry a greater risk of nonpayment of interest or principal than higher-rated bonds. The principal risk of mortgage dollar rolls is that the security the Fund receives at the end of the transaction may be worth less than the security the Fund sold to the same counterparty at the beginning of the transaction. The principal risk of mortgage-related and asset-backed securities is that the underlying debt may be prepaid ahead of schedule, if interest rates fall, thereby reducing the value of the fund's investment. If interest rates rise, less of the debt may be prepaid. Funds that invest in bonds are subject to interest-rate risk and can lose principal value when interest rates rise. Bonds are also subject to credit risk, in which the bond issuer may fail to pay interest and principal in a timely manner.

1. Average annual total returns include the change in share price and reinvestment of dividends and capital gain distributions. Performance for Class A shares includes the historical performance of Class I shares from inception (1/2/91) through 12/31/03 adjusted to reflect the applicable sales charge and fees and expenses. Class I shares are generally only available to corporate and institutional investors. Class R shares are available only through corporate-sponsored retirement plans. **2. The Bloomberg Barclays U.S. Aggregate Bond Index** is a broad-based benchmark that measures the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, mortgage-backed securities (agency fixed-rate and hybrid adjustable-rate mortgage pass-throughs), asset-backed securities, and commercial mortgage-backed securities. Index results assume the reinvestment of all capital gain and dividend distributions. An investment cannot be made directly into an index. **3. Standard deviation** measures how widely dispersed a fund's returns have been over a specified period of time. A high standard deviation indicates that the range is wide, implying greater potential for volatility. **Beta** is a measure of historical volatility relative to an appropriate index (benchmark) based on its investment objective. A beta greater than 1.00 indicates volatility greater than the benchmark's. **R-Squared** measures the percentage of a fund's movements that result from movements in the index. The **Sharpe Ratio** shown is calculated for the past 36-month period by dividing annualized excess returns by annualized standard deviation. **Effective Maturity** is the average time to maturity of debt securities held in the portfolio, taking into consideration the possibility that the issuer may call the bond before its maturity date. **Effective Duration** provides a measure of a fund's interest-rate sensitivity. The longer a fund's duration, the more sensitive the fund is to shifts in interest rates. The **Annual Turnover Rate** is as of the most recent annual shareholder report. **For more information about MainStay Funds®, call 800-624-6782 for a prospectus or summary prospectus. Investors are asked to consider the investment objectives, risks, and charges and expenses of the investment carefully before investing.
